

Accession numbers and gene names for each tip of the tree, organized by color-coded groups. The groups are: RGR-opsins (green), Peropsins (teal), Gluopsins (purple), Retinochromes (orange), Varropsins (pink), and an Outgroup (grey). The text is organized into columns corresponding to these groups, with each column containing a list of accession numbers and gene names. The text is organized into columns corresponding to these groups, with each column containing a list of accession numbers and gene names. The text is organized into columns corresponding to these groups, with each column containing a list of accession numbers and gene names.
